Diode Selection Guide

Key Facts

JJM was established in 1995 and became public listed in 2017. Since then, there has been phenomenal growth, with a CAGR of 31% (2017-2024)

<p>Founded In 1995. Current Registered Capital USD 105 million* (CNY 736 million)</p>	<p>Revenue USD 406 million* (CNY 2.9 billion) revenue in 2024</p>	<p>Headquartered In China, International HQ in Singapore</p>
<p>Facilities 9 Subsidiaries, 4 Wafer Fabs, 4 A&T sites, 7 R&D teams in 5 R&D centers</p>	<p>Sales Network Sales representatives & distributors across the globe</p>	<p>Employees Over 3,000 employees of which 15% are in R&D</p>

* CNY/USD for 2024

Our Vision is to be an internationally competitive and trusted manufacturer of power semiconductor devices

Our History

3 Main Pillars for Success

In creating values for you, we stand by our pillars of technological innovation, superior quality and competitive agility as keys to customer success and our continued growth to create value for our customers, shareholders, employees and community.

Global Network & Manufacturing Facilities

JJM Sales Offices (10) **JJM Manufacturing Sites (4)** **Distribution Partners AMERICAS, EUROPE, ASIA PACIFIC**

Solutions for Industry

JJM products are designed and developed to fulfill a diverse array of application requirements across various industries. Our innovative technologies and commitment to excellence enable faster market entry and improved cost efficiency for our customers.

Schottky Barrier Diodes	02
Fast Recovery Diodes	06
Transient Voltage Suppressors (TVS)	16
Electro Static Discharge (ESD) Diodes	43
Zener Diodes	54
Packages Diagrams and Dimensions	65

Schottky

Schottky Barrier Diode

Schottky barrier diodes (SBD for short), also called Schottky diodes, are constructed using a metal-semiconductor junction rather than a p-n junction, which results in their characteristic low forward voltage (typically between 0.2 to 0.5 volts) and high-speed performance. These properties make Schottky diodes ideal for power rectification, radio frequency (RF) applications, and as clamping diodes in circuits.

FRD

Fast Recovery Diode

Fast Recovery Diodes are designed to have a short reverse recovery time. This quick switching ability reduces energy losses in high-speed switching applications such as power supplies, inverters, and motor drives.

TVS

Transient Voltage Suppressor

TVS (Transient Voltage Suppressor), also known as Transient suppression diodes, are designed to protect electronic circuits from transient voltage spikes, such as those caused by lightning strikes and power line surges. TVS diodes are commonly used in power supply protection, telecommunications, and data lines to safeguard sensitive components from damage.

ESD

Electro Static Discharge Diode

The ESD protection device is specially used for protecting sensitive electronic components from electrostatic discharge. These diodes are essential in protecting interfaces like USB, HDMI, and other data and communication ports.

Zener

Zener Diode

Zener Diodes are designed to allow current to flow in the reverse direction when the applied voltage reaches a specified breakdown voltage, known as the Zener voltage. Zener diodes are widely used in power supplies, reference voltage sources, and surge protection circuits, where they help maintain a constant output voltage despite variations in the input voltage or load conditions.

Schottky Barrier Diode

Schottky Barrier Diodes are semiconductor diodes with a low forward voltage drop and fast switching capabilities. They are constructed using a metal-semiconductor junction rather than a p-n junction, which results in their characteristic low forward voltage (typically between 0.2 to 0.4 volts) and high-speed performance. These properties make Schottky diodes ideal for power rectification, radio frequency (RF) applications, and as clamping diodes in circuits.

M Fast Recovery Diode

Fast recovery diode:

Fast recovery diode is a type of semiconductor diode specifically designed to switch off rapidly, reducing the time taken to recover from the conducting state to the non-conducting state. This quick switching ability reduces energy losses in high-speed switching applications. They are widely used in switch mode power supplies (SMPS), inverters, and motor drives.

Fast recovery epitaxial diode:

A Fast Recovery Epitaxial Diode (FRED) is a specific type of fast recovery diode that includes an epitaxial layer in its construction. The epitaxial layer significantly improves the diode's switching performance and reduces recovery time. They are commonly found in high-frequency power supplies and converters, as well as inverters and motor drives.

M Transient Voltage Suppressor (TVS)

TVS Diodes are designed to protect electronic circuits from transient voltage spikes, such as those caused by lightning strikes, power line surges, or electrostatic discharge (ESD). When a transient voltage exceeds the breakdown voltage of the TVS diode, it rapidly clamps the voltage to a safe level by shunting the excess energy to ground. TVS diodes are commonly used in power supply protection, telecommunications, and data lines to safeguard sensitive components from damage.

Bidirectional or unidirectional voltage clamping devices with fast response time.

Transient power varies from 200W-20000W.

Clamping voltage can be customized from 3.3V-600V or higher to meet different requirements and specifications.

Electro Static Discharge (ESD) Diode

ESD Diodes are specialized diodes used to protect sensitive electronic components from electrostatic discharge. ESD events can cause immediate damage or degrade the performance of electronic devices over time. ESD diodes are designed to respond quickly to ESD events by clamping the voltage spike and directing the excess energy to ground, thereby preventing it from reaching and damaging the protected device.

Small voltage clamping devices with fast response time.

Handles electrostatic voltage from 6kV to 30kV.

Can be customized from 2.8V-36V to meet customer requirement.

ESD

ESD

Zener Diodes are designed to allow current to flow in the reverse direction when the applied voltage reaches a specified breakdown voltage, known as the Zener voltage. Unlike regular diodes, which block reverse current, Zener diodes are heavily doped to create a sharp and well-defined breakdown voltage. This property makes them useful for voltage regulation, where they can maintain a constant output voltage despite variations in the input voltage or load conditions. Zener diodes are widely used in power supplies, reference voltage sources, and surge protection circuits.

Power rating ranges from 0.5W-5W.

Voltage rating ranges from 2.4V to 200V.
